SHUBHAM KUMAR

AI PRODUCT MANAGEMENT | TECHNICAL PRODUCT DELIVERY

kansalshubham014@gmail.com | +91-8267981604 | Meerut, Uttar Pradesh | LinkedIn

PROFESSIONAL SUMMARY

AI Product Management professional with 9+ years of technology experience, combining enterprise engineering expertise with AI solution delivery, stakeholder alignment, and product prioritization. Led an Atlassian Rovo AI agent from problem discovery through rollout, evaluated AI outputs using developer feedback, and applied funnel analysis, user research, and RICE prioritization to a personal-finance product capstone. Skilled at translating business problems into practical, technically feasible solutions.

PROJECTS

Kiran Saree Center | *E-commerce Web Application · Client UAT* | Live Website

- Coordinated end-to-end delivery of an e-commerce application and admin dashboard, aligning merchant requirements, technical implementation, and validation across four ethnic-wear categories.
- Designed a Telegram-based product-submission workflow connecting the merchant and technical team, streamlining product-information handoffs and supporting merchant feedback before client UAT.
- Coordinated merchant feedback, tracked usability issues across the website and admin dashboard, and supported solution refinement before client user acceptance testing (UAT).

Atlassian Rovo AI Agent | *Jira Defect Analysis & Resolution Support*

- Independently identified prolonged production-defect investigation as an operational pain point and initiated end-to-end delivery of an Atlassian Rovo AI agent for approximately 20 COBOL developers and support-team members, automating defect analysis and generating potential solutions for daily use.
- Evaluated AI-generated defect analyses using a numeric scoring approach against production-defect evidence, assessing technical recommendations, resolution guidance, and source-ticket traceability; identified hallucinations on unfamiliar defects and introduced guardrails requiring the agent to report when no relevant historical evidence was found rather than generate unsupported solutions.
- Incorporated developer feedback and defect-analysis findings to prioritize AI workflow improvements, communicated proposed changes to stakeholders, and secured management approval for rollout.
- Supported daily use of an Atlassian Rovo AI agent by most of a 20-member COBOL development and support team; achieved an estimated 80–90% acceptable-response rate after introducing hallucination guardrails, while measured before-and-after cases showed defect-investigation time decreasing from 2–3 hours to 1–2 hours per issue.

P**honePe Smart Spend Coach |** *Product Management Capstone* | View Project Artifacts

- Conducted exploratory interviews with salaried professionals to understand spending habits and budgeting difficulties, identifying challenges in recognizing spending patterns; refined the Figma prototype with screen-level improvements and back navigation to improve usability.
- Analyzed stage-level conversion rates and user drop-offs across the Smart Spend Coach funnel, identified the transition from spending insights to budget-related action as the priority improvement opportunity, and used the findings to inform MVP prioritization.
- Applied RICE prioritization to evaluate candidate features and select budget tracking and alerts for the Smart Spend Coach MVP; defined proposed success metrics for activation, engagement, budget adherence, and AI output quality to assess product adoption and effectiveness.
- PRD, Product Decision & Evidence Dossier, Figma prototype are available in project artifacts.

EXPERIENCE

Assistant Manager | Concentrix Catalyst | *Dec 2025–Present*

- Resolved a critical production incident within approximately 1 hour by combining AI-assisted code analysis with technical diagnosis to identify a file-length mismatch, supporting rapid incident resolution during a client call.
- Defined requirements and aligned stakeholders to deliver a production self-service correction feature enabling end users to update incorrect trip-accounting entries independently, addressing 35–40 cases per week and reducing reported resolution time from approximately 3 hours to 5 minutes while reducing reliance on crew callers and support teams.
- Evaluated alternative solutions for cross-system requirements, balancing business priorities, technical feasibility, and implementation constraints across mainframe and Java applications to inform solution selection.
- Perform COBOL development, root-cause analysis, code reviews, and release activities while providing technical guidance to team members.

Mainframe Developer | Concentrix Catalyst | *May 2023–Nov 2025*

- Worked with client IT stakeholders to clarify rail-operations requirements, evaluate solution alternatives, and assess technical feasibility, implementation effort, and cost to support informed solution decisions.

Module Lead / Module Owner & Developer | Sopra Steria India Pvt. Ltd. | *Jul 2017–Apr 2023*

- Coordinated requirements and implementation of a logging and rollback capability for a Credit Agricole system managing 18 million contracts, addressing audit-trail and data-recovery needs while balancing system performance and one-week log-retention constraints.
- Balanced audit-trail requirements with system-performance constraints by adopting activity-based logging and a one-week retention policy, aligning the solution with client operational requirements.

PRODUCT SKILLS & TOOLS

Product Management: Requirements Discovery, User Stories, Exploratory User Research, MVP Prioritization (RICE), Prototyping, Product Success Metrics, Agile/Scrum
AI & Product Tools: Atlassian Rovo, Prompt Engineering, AI Workflow Design, Jira, Figma, Lovable, n8n
Technical Foundation: Mainframe Systems, COBOL, Root Cause Analysis, Cross-System Integration, Technical Feasibility Assessment
Leadership & Collaboration: Stakeholder Management, Cross-functional Collaboration, Problem-Solving, Technical Communication

EDUCATION & PROFESSIONAL DEVELOPMENT

Product Management with Applied AI Program | iHUB DivyaSampark, IIT Roorkee | Dec 2025 – Aug 2026
B.Tech in Computer Science | KIET Engineering College, Ghaziabad | 2013 – 2017
